

Pharmacy Workflow Pain Point Questionnaire

General workflow research form with answer space

Purpose: This questionnaire is for general workflow research only. Do not include patient information, confidential company data, prescription details, private internal documents, screenshots, or proprietary information.

Goal: Understand where pharmacy software, task flow, inventory, compliance, and daily operations create friction so better workflow-first software can be designed in the future.

Interview tip: If an answer mentions a frustrating screen or task, ask: "What were you trying to accomplish, and what did the system make you do instead?"

Interviewee / Role / Date

1. Background

1. How many years have you worked in pharmacy?

2. What pharmacy roles have you worked in?

3. What types of pharmacies have you worked in?

- ☐ Retail chain
- ☐ Independent
- ☐ Hospital
- ☐ Specialty
- ☐ Mail order
- ☐ Other

4. What parts of pharmacy work have changed the most over your career?

5. What parts have barely changed but probably should have?

2. Daily Workflow

1. What are the most common tasks you repeat every day?

2. Which tasks take longer than they should?

3. Which tasks require too many screens, clicks, or steps?

4. What tasks are easiest for new employees to misunderstand?

5. Where do interruptions hurt the workflow the most?

6. What task would you redesign first if you could?

3. Pharmacy Software

1. What makes current pharmacy software frustrating?

2. What does the software do well?

3. What simple task requires too many screens?

4. What information is hardest to find quickly?

5. Where does the software force employees to remember too much?

6. What should the system explain better?

7. What should the system automate but currently does not?

8. What should never be automated without pharmacist approval?

4. Inventory and Outdates

1. What pharmacy inventory tasks waste the most time?

2. How painful are outdates compared to other tasks?

3. What makes outdates hard to manage?

4. Are pull windows easy for employees to remember? Why or why not?

5. What happens when outdates are missed?

6. What would an ideal outdate workflow look like?

7. Should the system guide employees on where pulled items go? Explain.

8. What categories matter for routing pulled product?

- ☐ Trash
- ☐ Return goods / RGM
- ☐ Hazardous / toxic
- ☐ Pharmacy tote
- ☐ Vendor return
- ☐ Manager / pharmacist review
- ☐ Other

5. Compliance and Safety

1. What compliance tasks are easiest to forget?

2. Which compliance tasks are most stressful?

3. What logs or checks feel outdated?

4. What tasks should require pharmacist verification?

5. What tasks should require manager verification?

6. Where would automatic audit trails help?

7. What kind of alerts would be useful instead of annoying?

6. Temperature Monitoring

1. What temperature checks are required during normal operations?

2. Which coolers, freezers, or fridges matter most?

3. What happens when a temperature is out of range?

4. Would automatic Wi-Fi temperature probes reduce work? Why or why not?

5. What should the system do when a temperature alert happens?

6. What corrective action steps should appear for employees?

7. Who should be notified first?

8. What should be logged automatically?

7. Training and New Employees

1. What pharmacy tasks are hardest to train?

2. What do new employees struggle with most?

3. What mistakes happen because the workflow is confusing?

4. Would step-by-step task guidance help? Explain.

5. Where would built-in SOP links help?

6. What should the system teach during the task instead of in separate training?

8. Task-First Workflow

1. Would it help if the system started with 'What are you trying to do?' instead of making employees choose from many screens?

2. What task categories would make sense?

- ☐ Fill / verify prescription
- ☐ Inventory
- ☐ Outdates
- ☐ Returns
- ☐ Temperature issue
- ☐ Patient / order lookup
- ☐ Exception resolution
- ☐ Compliance task
- ☐ Other

3. What pharmacy task would benefit most from a guided workflow?

4. What should the system show first during a task?

5. What information should stay hidden unless needed?

9. Ideal Pharmacy System

1. If you could design the perfect pharmacy software, what would it do differently?

2. What would save the most labor hours?

3. What would reduce pharmacist interruptions?

4. What would make technicians more independent without risking safety?

5. What would improve patient wait times?

6. What would improve compliance?

7. What would make the pharmacy less stressful?

8. What should never change because it works well?

10. Final Thoughts

1. What is the biggest pharmacy workflow problem most software companies do not understand?

2. What do pharmacists complain about that leadership may not fully see?

3. What do technicians complain about that pharmacists may not fully see?

4. What would you want a software designer to understand before building pharmacy tools?

5. If one problem could be fixed tomorrow, what would it be?
